

# CAIS Web

- What do we mean by “webification”?
  - Use internet browser-based client to replace CAIS software
  - Will use same TCP/IP communications as current CAIS
  - Could make CAIS available from the internet (then again...)
  - Eliminate site use of Oracle Client software

# Possible Benefits

- Easier to deploy software changes
- Ability to use more current technologies (PowerBuilder is becoming obsolete)
- Better security – especially for sites with strict policies
- Use XML to link CAIS to other systems
- Eliminate Oracle version problems
- Comply with CIO “e-Government” goals

# Web Study

- Evaluate possible technologies
- Perform cost-benefit analysis
- Create report for user community review
- Create prototype system (against centralized test system) to get user acceptance

# CAIS CMMS Links

- 14 CMMS's identified in DOE
- Passport and Maximo are used most (12 sites)
- RSIS has additional DBA support available
- Will work with sites to develop custom CMMS / CAIS links
